

10-MINUTE COLLABORATIVE REVIEW

Digital Lesson Accessibility Quick Check

For Google Classroom, Docs, Slides, Forms, videos, or other digital learning materials

Purpose Review one existing digital lesson or resource with a colleague, identify one practical improvement, and make learning easier to access. This is a supportive conversation, not an evaluation or compliance score.

Review date: September 3, 2026	Grade/course: Grades 9-12 ELA
Educator role/subject: Secondary English teacher	Digital material reviewed: Google Slides lesson

Directions: Mark an X in Ready, Revise, or N/A. Add a short note only where useful. Then agree on one priority change.

Accessibility check	Ready	Revise	N/A	Notes
The learning goal and directions are clear, brief, and broken into manageable steps.	X			
Text is easy to read: useful font size, spacing, and strong color contrast.	X			
Headings and layout are consistent, uncluttered, and easy to scan.	X			
Important information appears as selectable text, not only inside an image.		X		Directions were not selectable.
Meaningful images have a short description or alt text when needed.		X		One image needed alt text.
Video or audio includes accurate captions or a usable transcript.			X	No audio or video.
Links have descriptive names, work correctly, and open the intended resource.	X			
Meaning is not communicated by color, sound, or position alone.	X			
Students can use helpful access tools such as zoom, keyboard navigation, read-aloud, or voice typing.		X		Image-only text blocked read-aloud.
The material protects privacy and does not display unnecessary student or personal information.	X			
One priority change we agreed to make: Replace image-only directions with selectable text, numbered steps, and a brief example.				
Why this change matters for learners: Students can enlarge, select, or use text-to-speech with the directions and follow the steps more easily.				

Privacy note: Remove student names and identifying information before saving screenshots or sharing evidence.

FOR THE PORTFOLIO OWNER

Implementation & Evidence Record

Complete this page after the collaborative review. Honest, small-scale evidence is enough: one colleague, one existing digital item, one useful change.

Record what happened

Implementation: During Week 2, I met with a secondary English teacher for about 15 minutes and used the checklist to review a Google Slides lesson.
Change made or planned: The educator replaced image-only directions with selectable text, numbered steps, and a short example.
Effect on the educator: The educator recognized that image-based text can block text selection and read-aloud tools and planned to reuse the check.
Evidence: Completed checklist, revised slide, before-and-after description, and colleague feedback.

Three questions to ask your colleague

- What part of the checklist was most useful or made you notice something new?
Response: The selectable-text check revealed that directions inside an image could not be read aloud.
- What change will you make, or what did you change, because of this review?
Response: Replaced image-only directions with selectable text, numbered steps, and an example.
- Would this tool be useful again? Why or why not?
Response: Yes. The short format fit normal lesson planning.

How it supports Standard 4.1

4.1.b: Equitable access The review helps a colleague notice and reduce barriers in digital content and learning tools.	4.1.c: Supportive coaching culture The short, non-evaluative conversation supports collaborative learning and improvement.
